

Important Words to know for the Manufacturing Company Job Exploration Tour

Packaging - food cartons, containers, trays, boxes.

Manufacturing— Process of turning materials into a finished product.

Shift - The length of time people are working. In a manufacturing business it is common that people work 10 and 12 hour shifts.

Quality Control (QC) – This is a process that a business uses to check the quality of all stages of production.

Slitter – This is a process where materials are cut or bent with a large machine to specific lengths.

Extrusion – This is a process where materials are pushed through a machine to create a new shape. Think of how tater tots come from potatoes.

Press – Process of printing on materials that will be on the end product packaging.
